*“...A decade ago information systems used to be just a support for core business activities. Today situation is completely different. Information technologies might be both, key to success if you use them right and extremely destructive power you use them wrong. Information Systems Management is really a degree which is designed to provide up-to-date knowledge. It helped me to get insight and deeply understand how IT affects business and how it should be managed in order to make your organization effective and efficient.”*

(Ali, ISM graduate 2019)
